

The Frog Street Pre-K curriculum supports every aspect of your child's development - physical, social, emotional, cognitive, and linguistic. One important focus is the development of language and literacy skills.

The program is supported by an impressive body of research on how young children develop early literacy and pre-reading skills. Children learn skills through playful, child-centered activities that ensure they maintain their love of language as they develop their ability to decipher it. This program also provides purposeful, engaging mathematical investigations and activities that build upon your child's informal understandings of patterns, numbers, measurement and shapes.

Frog Street Pre-K honors this joyful approach to learning. Woven into intriguing themes, language and literacy activities are designed to purposefully address the following.

- Phonological Awareness - being able to hear and reproduce sounds
- Alphabet Knowledge- recognizing letters and their function
- Vocabulary- learning words
- Comprehension- retelling stories in own words
- Written Expression- understanding of the functions of writing
- Number & Operations- understanding quantity and numerical relationships
- Geometry & Spatial Awareness- understanding shape, location, & spatial transformations
- Measurement- quantifying and comparing space, length, weight, area, & volume
